

AI Audit Offer Overview

Know where AI fits what to do first and what to ignore

Start with the bottleneck that matters most.

The AI Audit uses your real workflow, facts, and constraints to separate useful opportunities from distracting tools.

What the Audit Helps You Decide

1 Where AI can help

See the parts of the business where AI may save time, support revenue, or protect the customer experience.

2 What to do first

Compare the strongest opportunities by likely impact and effort, then choose one practical first move.

3 What to ignore

Set aside tools and projects that do not fit the bottleneck, evidence, or priorities in front of you.

How the Audit Works

We focus on one costly bottleneck, trace what happens now, and examine the evidence available. You receive a plain-English diagnosis, a ranked view of the useful opportunities, and a recommended first move with a clear way to judge whether it helped.

Book Your Fit Call

Book a 15-minute fit call before you leave

\$0 due in the room - the call is the next step

\$799 attendee price - available on this week's follow-up calls

\$999 standard price - for the AI Audit

The Audit is diagnosis. Any implementation is a separate decision after you understand the map.
